Museum of Science and Industry

Ballard Engineering built a 1.75MW Cogeneration system with-in the Museum of Science & Industry in downtown Chicago. The system itself is located on the second floor of a portion of the existing exhibit space where it will be on display for all patrons to view. The system is powered by one (1) Cummins 1,750KW 1500RPM natural gas fired engine generator set and will provide 3,600 lbs./hr. 40PSI steam.
